

February 2019 Monthly Catalogue

Welcome to the February 2019 edition of the NHBS Monthly Catalogue, which lists all new titles added to our website in the last month.

This month I will start with botany, as we have some excellent titles lined up. First off is the fourth edition of Clive Stace's well known [New Flora of the British Isles](#). There are two notable field guides in the works, both due March: [Field Guide to the Orchids of Europe and the Mediterranean](#) from the Royal Botanic Gardens, Kew, and the second edition of [Field Guide to Wild Flowers of South Africa](#) from Struik Nature. A number of books will be released in paperback, particularly [The Food Explorer: The True Adventures of the Globe-Trotting Botanist Who Transformed What America Eats](#), due February from Dutton Books, [American Eden: David Hosack, Botany, and Medicine in the Garden of the Early Republic](#), due July from Liveright Publishing Corporation, and [Darwin's Most Wonderful Plants: Darwin's Botany Today](#), due July from Profile Books.

For ornithologists and birdwatchers we have two new titles from Bloomsbury to announce, [RSPB Spotlight Sparrows](#) and [A Shadow Above: The Fall and Rise of the Raven](#), in paperback, both due in July. In addition we have several more obscure titles, including two books from Norway, [Birding the Islands: A Birwatchers' Guide to Lofoten and Vesterålen](#) and [Birding Varanger: The Biotope Guide to the Best Bird Sites in Arctic Norway](#), and a raptor book from BirdLife Hungary, [The Blue Vesper: Ecology and Conservation of the Red-Footed Falcon](#).

For other animal groups, we have a smattering of titles. WILDGuides will publish [Europe's Sea Mammals Including the Azores, Madeira, the Canary Islands and Cape Verde: A Field Guide to the Whales, Dolphins, Porpoises and Seals](#) in July. Herpetologists can look forward to [Amphibian Biology, Volume 11, Part 5: Status of Conservation and Decline of Amphibians: Eastern Hemisphere: Northern Europe](#), due April from Pelagic Publishing, and [RSPB Spotlight Frogs and Toads](#), due July from Bloomsbury. Those interested in invertebrates have a choice from, amongst others, [Caddisfly Adults \(Trichoptera\) of Britain and Ireland](#), which has just been published by the Freshwater Biological Association, [Dance of the Dung Beetles: Their Role in Our Changing World](#), due April from Wits University Press, and the second edition of [Scorpions of Southern Africa](#), due March from Struik Nature. More of a nature narrative is Peter Marren's forthcoming book [Emperors, Admirals & Chimney Sweepers: The Naming of Butterflies and Moths](#), due May from Little Toller Books.

Conservation biologists should take note of [The Last Butterflies: A Scientist's Quest to Save a Rare and Vanishing Creature](#) from Princeton University Press and Bloomsbury's [The Missing Lynx: The Past and Future of Britain's Lost Mammals](#), both due July. A number of notable conservation titles are being reissued in paperback, including [The End of the Wild](#) from MIT Press, [Wilding: The Return of Nature to an English Farm](#), due March from Picador, and [Our Place: Can We Save British Nature Before it is Too Late?](#), due April from Vintage. Then there are three major titles dealing with environmental issues more generally. Renowned marine biologist Daniel Pauly, who coined the term "shifting baselines", is writing [Vanishing Fish: Shifting Baselines and the Future of Global Fisheries](#), due June from Greystone Books. Famous geographer and historian Jared Diamond is writing [Upheaval: How Nations Cope with Crisis and Change](#), due May from Allen Lane. Lastly, there is [Achieving the Paris Climate Agreement Goals: Global and Regional 100% Renewable Energy Scenarios with Non-Energy GHG Pathways for +1.5°C and +2°C](#), due February from Springer.

On the topic of evolution there are a number of excellent new titles in the making, including [Good Enough: The Tolerance for Mediocrity in Nature and Society](#), due June from Harvard University Press, and [Life Finds a Way: What Evolution Teaches Us About Creativity](#), due July from Oneworld Publications (I personally really enjoyed Wagner's previous book *Arrival of the Fittest*). There are also paperback reissues of [A Taste for the Beautiful: The Evolution of Attraction](#), due July from Princeton University Press, and [The Ascent of Birds: How Modern Science is Revealing their Story](#), due March from Pelagic Publishing. Ecologists will be interested in [Incredible Journeys: Exploring the Wonders of Animal Navigation](#), due April from Hodder & Stoughton, and the third edition of [The Ecology of Tropical East Asia](#), due June from Oxford University Press.

Those who would rather curl up with a good book can look out for Simon Barnes's [On the Marsh: A Year Surrounded by Wildness and Wet](#), due June from Simon & Schuster, or the paperbacks of Attenborough's [Life on Earth \(40 Anniversary Edition\): The Greatest Story Ever Told](#), due May from Harper Collins, or [A Wood of One's Own](#), due April from Duckworth Overlook. A particularly peculiar title is [A Polar Affair: Antarctica's Forgotten Hero and the Secret Love Lives of Penguins](#), due June from Pegasus Books. Finally, a bit more cerebral is the fourth edition of [The Origins of the Modern World: A Global and Environmental Narrative from the Fifteenth to the Twenty-First Century](#), due July from Rowman & Littlefield.

As always, if you are looking for a particular title that we do not yet have in our range, or you would like to suggest a title for NHBS to stock, please do get in touch.

Marine & Freshwater Biology

Reproductive Biology and Phylogeny of Fishes (Agnathans and Bony Fishes)

Phylogeny, Reproductive System, Viviparity, Spermatozoa

Barrie GM Jamieson(Editor)

It is perhaps because fishes live in a buoyant medium, whether it be fresh or sea water, that they show a diversity in body shapes that is unparalleled by other vertebrates. There is also a unique diversity in the modes of reproduction, whether by...
