

March 2020 Monthly Catalogue

Welcome to the March 2020 edition of the NHBS Monthly Catalogue, which lists all new titles added to our website in the last month.

We lead with a selection of mammal titles. An exciting addition to our range is a series of eleven books on animal bones and how to prepare and articulate skeletons for display, written by self-professed bone man Lee Post ([see our interview here](#)). The [Bone Building Books](#) encompass eight manuals to various mammal groups, one on birds, a very useful [Bone Builder's Notebook](#) with general information, and finally the [Bone Guide To Selected Land Mammals of the Northwestern States](#), which is a reference guide more than a bone articulation manual. Lynx, the Spanish publisher who has recently completed the 9-volume series Handbook of the Mammals of the World, will start publishing illustrated checklists for specific regions or countries, as they have started doing for birds. The first of these, [Mammals of the Southern Cone: Argentina, Chile, Paraguay, Uruguay](#) has just been published. Several large mammal biology books are currently in the making, including [The Bowhead Whale *Balaena mysticetus*: Biology and Human Interactions](#), due August from Academic Press, [Chimpanzee: Lessons from our Sister Species](#), due August from Cambridge University Press, and the second edition of [Bats of Southern and Central Africa: A Biogeographic and Taxonomic Synthesis](#), due June from Wits University Press.

For birdwatchers, there is the all-new [Peterson Reference Guide to Bird Behavior](#) coming in September from Houghton Mifflin Harcourt, while Helm will publish [Birds of Cuba: A Photographic Guide](#) in August. Furthermore, there is a number of smaller field guides, including the third edition of [A Naturalist's Guide to the Birds of Australia](#), due May from John Beaufoy Publishing, and a new series of fold-out guides, a collaboration between Bloomsbury Publishing and the RSPB: the RSPB ID Spotlights. Four guides have been announced, covering [garden birds](#), [coastal birds](#), [wetland birds](#), and [birds of prey](#).

For the remaining vertebrate groups, we have two books for reptiles and amphibians, and two for fish. Springer will publish [Lizards of Patagonia: Diversity, Systematics, Biogeography and Biology of the Reptiles at the End of the World](#) in July. John Beaufoy will publish second editions of [A Naturalist's Guide to the Reptiles & Amphibians of Bali](#) in May and [Diving & Snorkelling Guide to Tropical Marine Life of the Indo-Pacific Region](#) in July. The same area also is covered in the upcoming fifth edition of [A Field Guide to Tropical Reef Fishes of the Indo-Pacific: Australia, Indonesia, Malaysia, Philippines, Vietnam](#), due August from Tuttle Publishing.

For entomologists and other invertebrate workers there is a range of books forthcoming. Bloomsbury Publishing has announced the second edition of [Field Guide to the Dragonflies of Britain and Europe](#), due August. We have just received stock of [A Taxonomic Guide to the Stick Insects of Borneo, Volume 3](#), published by Natural History Publications Borneo, and a new volume in the Guide to the Butterflies of the Palearctic Region series from Omnes Artes, titled [Pieridae Part 4: Subfamily Pierinae \(Partim\), Tribe Anthocharidini](#). For those looking for a more narrative book, Little Toller has announced the paperback of [Emperors, Admirals & Chimney Sweepers: The Weird and Wonderful Names of Butterflies and Moths](#) for July, while Liveright Publishing Corporation will publish E.O. Wilson's memoir [Tales from the Ant World](#) in August. The last book worth mentioning here does not deal with insects but will be of interest to invertebrate workers: [Guide to the Identification of Marine Meiofauna](#), just published by Verlag Friedrich Pfeil.

For botanists, the next instalment in the British Wildlife Collection from Bloomsbury Publishing is [Woodland Flowers: Colourful Past, Uncertain Future](#), due August. Safe Haven Books will publish the second edition of [London's Street Trees: A Field Guide to the Urban Forest](#) in May, while W.W. Norton is publishing [The Journeys of Trees: A Story about Forests, People, and the Future](#) in August. The latter deals with forest migration: what palaeobotany can tell us about the slow-motion movement of forests over time.

On the topic of conservation biology and environmental issues we have a range of titles. Starting at home, Vintage will publish the paperback of [The Garden Jungle: Or Gardening to Save the Planet](#) in April. Two books looking at issues on a national level are the paperbacks of [Green and Prosperous Land: A Blueprint for Rescuing the British Countryside](#) and [Invasive Aliens: The Plants and Animals from Over There That Are Over Here](#), both due April from Harper Collins. Turning to issues affecting marine and freshwater habitats, Harper Collins has just published [Water Lands: A Vision for the World's Wetlands and Their People](#), backed by Wetlands International. The University of Minnesota Press will publish [Red Gold: The Managed Extinction of the Giant Bluefin Tuna](#) in April. And then there are two memoirs from marine conservationists: the paperback of Callum Roberts's [Reef Life: An Underwater Memoir](#), due July from Profile Books, and a rerelease of Sylvia Earle's classic book [Sea Change: A Message to the Oceans](#), due April from Texas A&M University Press. Lastly, two books proposing a way forward that have just been published are [The Conservation Revolution: Radical Ideas for Saving Nature Beyond the Anthropocene](#) from Verso Books and [The Future We Choose: Surviving the Climate Crisis](#) from Manilla Press, an imprint of Bonnier Books.

For evolutionary biologists and palaeontologists we have the paperback of [Life Finds a Way: What Evolution Teaches Us About Creativity](#), due May from Oneworld Publications, and the paperback of [Squid Empire](#), due August from The Experiment, which has been retitled [Monarchs of the Sea: The Extraordinary 500-Million-Year History of Cephalopods](#). A more practical book is [A Guide to Fossil Collecting on the South Dorset Coast](#), just released by Siri Scientific Press.

In the category nature writing, we have a new book by Helen Macdonald of H is for Hawk called [Vesper Flights](#), due August from Jonathan Cape, Patrick Barkham is writing [Wild Child: Coming Home to Nature](#), which is due May from Granta, Stephen Rutt's [The Seafarers: A Journey Among Birds](#) will be released in paperback in June by Elliott & Thompson, and the paperback of [Rock Pool – Extraordinary Encounters Between the Tides: A Life-Long Fascination Told in Twenty-Four Creatures](#) is due April from September Publishing. Finally, and this is more popular science, there will be a new book from palaeontologist and geologist Donald Prothero. Next to these topics he is also a noted sceptic and has written several books debunking pseudoscience. His next book, [Weird Earth: Debunking Strange Ideas about Our Planet](#), due September from Indiana University Press, will combine these two interests.

As always, if you are looking for a particular title that we do not yet have in our range, or you would like to suggest a title for NHBS to stock, please do get in touch.

Leon Vlieger

Life Finds a Way

What Evolution Teaches Us About Creativity

Andreas Wagner(Author)

Darwin's theory of evolution was a monumental achievement, but there was much he did not know. In his 'survival of the fittest' model each step must go forward, life always progressing up the slope towards an evolutionary peak. There is...

The Demon in the Machine

How Hidden Webs of Information Are Finally Solving the Mystery of Life

Paul Davies(Author)

When Darwin set out to explain the origin of species, he made no attempt to answer the deeper question: what is life? For generations, scientists have struggled to make sense of this fundamental question. Life really does look like magic: even a...

On the Origin of Evolution

Tracing 'Darwin's Dangerous Idea' from Aristotle to DNA

John Gribbin(Author), Mary Gribbin(Author)

The theory of evolution by natural selection did not spring fully formed and unprecedented from the brain of Charles Darwin. Rather it has been examined and debated by philosophers the world over for thousands of years. This lively history traces the...
