

# August 2019 Monthly Catalogue

Welcome to the August 2019 edition of the NHBS Monthly Catalogue, which lists all new titles added to our website in the last month.

Birdwatchers and ornithologists have some excellent books to look forward to. Seabirds are all the rage at the moment and we have received stock of the privately published [Around the World for Albatrosses: Where to See All the Albatross Species](#). Bloomsbury, meanwhile, has three great titles lined up for January: A new Poyser monograph, [The Common Buzzard](#), a new Helm Field Guide, [Birds of Cyprus](#), and a new photographic guide, [Birds of Greece](#). Also projected for January is the fifth edition of [RSPB Complete Birds of Britain and Europe](#) from Dorling Kindersley. Of local interest is the privately published [Rostherne Mere – Birds of Mere and Margin: One Hundred and Thirty Years of Observations](#), which is in stock now.

There is only one notable mammal title to announce this month, the paperback of [Giraffe: Biology, Behaviour and Conservation](#), due October from Cambridge University Press. Similarly, there is one particular herpetology highlight to mention: [Field Guide to Frogs & Other Amphibians of Africa](#), due October from Penguin Random House South Africa. We have just received stock of the French book [La Passion des Salamandres: Le Tour du Monde des Urodèles en 80 Histoires](#), published by Pendlen Edition.

August brings some amazing invertebrate books. The Royal Entomological Society has just published [British Coleoptera Larvae: A Guide to the Families and Major Subfamilies](#), a unique book that has been 40 years in the making. CABI Publishing has announced [Courtship and Mating in Butterflies](#) for December. And Harvard University Press will publish [Desert Navigator: The Journey of an Ant](#) in January – the author Rüdiger Wehner has worked on ants for almost half a century. We also received stock of the French [Les Coléoptères Saproxyliques de France: Catalogue Écologique Illustré](#), published by the Paris Muséum National d'Histoire Naturelle. Lastly, not an insect, but still of tremendous interest, we will soon have stock of [Borneo Spiders: A Photographic Field Guide](#), published by the Sabah Forestry Department.

Conservation biologists can look out for the fifth edition of [Live Trapping of Small Mammals: A Practical Guide](#), published by The Mammal Society, which has been unavailable for a while. Two paperback reissues come in the form of [Biological Invasions and Animal Behaviour](#), due October from Cambridge University Press, and [The Deep: The Hidden Wonders of Our Oceans and How We Can Protect Them](#), due January from Wildfire. Wider environmental concerns are addressed in Greta's Story: [The Schoolgirl Who Went on Strike to Save the Planet](#), due August from Simon & Schuster, and the paperback reissue of [The Uninhabitable Earth: A Story of the Future](#), due February from Penguin Books.

Practising biologists will be interested to hear that Cambridge University Press is reissuing [The Study of Behavior: Organization, Methods, and Principles](#) in paperback in October. More theoretically inclined researchers, on the other hand, can look out for the edited collection [The Theory of Evolution: Principles, Concepts, and Assumptions](#), due January from the University of Chicago Press.

We round off this month's selection with a mixture of books, including some nature writing. Richard Mabey's next book will be titled [Turning the Boat for Home: A Life Writing about Nature](#), and is expected October from Chatto & Windus, while Jonathan Franzen's [The End of the End of the Earth](#) will be reissued in paperback in November by Fourth Estate. Environmental history is represented this month by [The Great Fen: A Journey Through Time](#), due November from NatureBureau. And there is one further book, also in stock now, on the Cheshire Meres tying in with the bird book mentioned above: [Rostherne Mere – Aspects of a Wetland Nature Reserve: Wildlife, People and Science Through Time](#).

As always, if you are looking for a particular title that we do not yet have in our range, or you would like to suggest a title for NHBS to stock, please do get in touch.

### Key Transitions in Animal Evolution

Rob DeSalle(Editor), Bernd Schierwater(Editor)  
Paperback reprint of a 2010 book. Tackling one of the most difficult and delicate of the evolutionary questions, this challenging book summarizes the more recent results in phylogenetics and developmental biology that address the evolution of key...

### Our Political Nature

The Evolutionary Origins of What Divides Us  
Avi Tuschman(Author)  
Our Political Nature is the first book to reveal the hidden roots of our most deeply held moral values. It shows how political orientations across space and time arise from three clusters of measurable personality traits. These clusters entail...

### Ancestors in Our Genome

The New Science of Human Evolution  
Eugene E Harris(Author)  
In 2001, scientists were finally able to determine the full human genome sequence, and with the discovery began a genomic voyage back in time. Since then, we have sequenced the full genomes of many of mankind's primitive relatives at a remarkable...

### Origins of Darwin's Evolution

Solving the Species Puzzle Through Time and Place  
J David Archibald(Author)  
In On the Origin of Species (1859), Charles Darwin presented his evidence for evolution and natural selection as its mechanism. He drew upon his earliest data gathered during his voyage on the HMS Beagle, which included collecting mammalian fossils...

### The Goodness Paradox

How Evolution Made Us More and Less Violent  
Richard W Wrangham(Author)  
It may not always seem so, but day-to-day interactions between individual humans are extraordinarily peaceful. That is not to say that we are perfect, just far less violent than most animals, especially our closest relatives, the chimpanzee and their...

### The Theory of Evolution

Principles, Concepts, and Assumptions  
Samuel M Scheiner(Editor), David P Mindell(Editor)  
Darwin's nineteenth-century writings laid the foundations for modern studies of evolution, and theoretical developments in the mid-twentieth century fostered the Modern Synthesis. Since that time, a great deal of new biological knowledge has been...
