

# August 2021 Monthly Catalogue

Welcome to the August 2021 edition of the NHBS Monthly Catalogue, which lists all new titles added to our website in the last month.

We have four notable bird books this month: Christopher Helm is kicking off a new series of Helm Wildlife Guides with [Birds of the Middle East](#), due January, while Liverpool University Press has just published a new avifauna, [The Birds of Wales. Nests](#), a very nicely illustrated book from Particular Books, showcases the work of Susan Ogilvy, while Doubleday will publish John-Lewis Stempel's newest book [The Soaring Life of the Lark](#) – both of these are due in October. Beyond birds, we have one book on invertebrates published by ConchBooks worth highlighting: [Bivalvia of German Marine Waters of the North and Baltic Sea](#), which is available now.

On the topics of botany and mycology we have three books. The first is a rerelease of Cambridge University Press's [The Freshwater Algal Flora of the British Isles](#), due August. This is an unmodified reprint of the 2011 second edition that has been unavailable for some years. KNNV Publishing has released the Dutch [Rothmaler Flora van Nederland: Afbeeldingen van Vaatplanten](#) (Rothmaler Flora of the Netherlands: Images of Vascular Plants), and Academic Press will publish the second edition of [Myxomycetes: Biology, Systematics, Biogeography and Ecology](#) in September.

For readers interested in conservation and environmental issues we have a wide choice of books this month. Three books that have just been published are [Strange Natures: Conservation in the Era of Synthetic Biology](#) from Yale University Press, which looks at the implications of biotechnological tools for conservation; [Conservation Science and Advocacy for a Planet in Peril: Speaking Truth to Power](#) from Elsevier; and [Is CITES Protecting Wildlife?: Assessing Implementation and Compliance](#) from Earthscan. Two books due in December are [Invading Ecological Networks](#) from Cambridge University Press, which applies lessons from complexity science and network ecology to biological invasions, and [Infectious Disease Ecology and Conservation](#) from Oxford University Press, which looks at the challenge of wildlife disease to conservation biology. Atlantic Books will publish [The Insect Crisis: The Fall of the Tiny Empires that Run the World](#) in January, which promises to complement David Goulson's upcoming book Silent Earth. Other environmental issues are covered by [The Empty Sea: The Future of the Blue Economy](#), recently published by Springer, and [Rebalancing Our Climate: The Future Starts Today](#), due January from Oxford University Press.

Three excellent books on evolution and palaeontology are also in the pipeline. Our first is [Observing Evolution: Peppered Moths and the Discovery of Parallel Melanism](#), due August from Johns Hopkins University Press, while January will bring [The Process of Animal Domestication](#) from Princeton University Press and [Essex Rock: Geology Beneath the Landscape](#) from Pelagic Publishing.

Finally, there are three paperback rereleases that fall under the subject heading of nature writing and biography. Columbia University Press is publishing [Thomas Berry: A Biography](#) in October, while Harper Collins is publishing [A Curious Boy: The Making of a Scientist](#), also in October, and [Islands of Abandonment: Life in the Post-Human Landscape](#) in January.

As always, if you are looking for a particular title that we do not yet have in our range, or you would like to suggest a title for NHBS to stock, please do get in touch. In the meantime, stay safe and keep well.

## Evolutionary Biology

### How to Argue With a Racist

History, Science, Race and Reality

Adam Rutherford(Author)

Race is real because we perceive it. Racism is real because we enact it. But the appeal to science to strengthen racist ideologies is on the rise – and increasingly part of the public discourse on politics, migration, education, sport and...

224 pages | Weidenfeld & Nicolson

Paperback	#254460	2021	9781474611251	£8.99

### The Genesis Quest

The Geniuses and Eccentrics on a Journey to Uncover the Origin of Life on Earth

Michael Marshall(Author)

How did life begin? Why are we here? These are some of the most profound questions we can ask. For almost a century, a small band of eccentric scientists has struggled to answer these questions and explain one of the greatest mysteries of all: how and...

360 pages | no illustrations | Weidenfeld & Nicolson

Paperback	#253390	Aug-2021	9781474611435	£10.99

### Survival of the Friendliest

Understanding Our Origins and Rediscovering Our Common Humanity

Brian Hare(Author), Vanessa Woods(Author)

From the authors of New York Times bestseller The Genius of Dogs comes a new popular science book about how 'friendliness' is in fact the key factor in the survival of our species. In exploring this hugely ambitious topic, Hare and Woods...

### Dental Cementum in Anthropology

Stephan Naji(Editor), William Rendu(Editor), Lionel Gourichon(Editor)

Tooth enamel and dentin are the most studied hard tissues used to explore hominin evolution, life history, diet, health, and culture. Surprisingly, cementum (the interface between the alveolar bone and the root dentin) remains the least studied...

### Darwin's Argument by Analogy

From Artificial to Natural Selection

Roger M White(Author), MJS Hodge(Author), Gregory Radick(Author)

In On the Origin of Species (1859), Charles Darwin put forward his theory of natural selection. Conventionally, Darwin's argument for this theory has been understood as based on an analogy with artificial selection. But there has been no...

### Another End of the World is Possible

Living the Collapse (and Not Merely Surviving It)

Pablo Servigne(Author), Raphaël Stevens(Author), Gauthier Chapelle(Author), Geoffrey Samuel(Translated by)

The critical situation in which our planet finds itself is no longer in doubt. Some things are already collapsing while others are beginning to do so, increasing the possibility of a global catastrophe that would mean the end of the world as we know...

### This Civilisation is Finished

Conversations on the End of Empire – And What Lies Beyond

Rupert Read(Author), Samuel Alexander(Author)

Industrial civilisation has no future. It requires limitless economic growth on a finite planet. The reckless combustion of fossil fuels means that Earth's climate is changing disastrously, in ways that cannot be resolved by piecemeal reform or...
