

December 2020 Monthly Catalogue

Welcome to the December 2020 edition of the NHBS Monthly Catalogue, which lists all new titles added to our website in the last month.

We are starting this month with books on vertebrates, birds and mammals in particular. May next year we expect William Collins to publish [Birds of the World](#), a combination of identification guide and the complete collection of Norman Arlott's bird paintings, while Jonathan Ball is publishing [The Complete Photographic Guide to Southern African Birds: With App and Calls](#). Author Tessa Boase, who first wrote about the history of the RSPB when profiling Emmeline Pankhurst, returns to this topic with [Etta Lemon: The Woman who Saved the Birds](#), due June from Aurum Press. On the subject of mammals, Johns Hopkins University Press announced [Opossums: An Adaptive Radiation of New World Marsupials](#) for May.

For entomologists, we have a great list. Bloomsbury will publish [Grasshoppers of Britain and Western Europe](#) in April and the third edition of [British Moths: A Photographic Guide to the Moths of Britain and Ireland](#) in May. We have stock of a very nice popular science book on flies, [Diptera: An Introduction to Flies](#), privately published by the author Nikita Vikhrev. Another title to look forward to is the May paperback rerelease of [The Last Butterflies: A Scientist's Quest to Save a Rare and Vanishing Creature](#) from Princeton University Press. The Dutch publisher Brill is releasing two noteworthy books in December: [The Flowering of Ecology: Maria Sibylla Merian's Caterpillar Book](#) and the second edition of [Catalogue of Palaearctic Coleoptera, Volume 6/1: Chrysomeloidea I \(Vesperidae, Disteniidae, Cerambycidae\)](#). Not insects, but of interest to arachnologists is [A Field Guide to the Spider Genera of India](#), due later this month.

We have three major botany books this month: [A Field Guide to the \(Wetter\) Zambian Miombo Woodland](#), published by the authors and in stock, [Aquatic and Wetland Plants of Southern Africa](#), due March from Briza Publications, and [European Bryaceae: A Guide to the Species of the Moss Family Bryaceae in Western & Central Europe and Macaronesia](#), due February from NatureBureau.

On the topics of wildlife conservation and environmental issues, there are a large number of interesting books forthcoming. Leaping Hare Press has announced [Gone: A Search for What Remains of the World's Lost Creatures](#) for April, while [Eating to Extinction: The World's Rarest Foods and Why We Need to Save Them](#), due May from Jonathan Cape, covers the topic of endangered food plants. Famous novelist Jonathan Franzen is working on [What If We Stopped Pretending?](#), due January from Fourth Estate. The controversial topic of palm oil gets a long-overdue examination in [Planet Palm: How Palm Oil Ended Up in Everything – and Endangered the World](#), due May from C. Hurst & Co Publishers. Then there is a slew of paperback rereleases: [The New Climate War: The Fight to Take Back Our Planet](#) (February, Scribe Publications), [Notes from an Apocalypse: A Personal Journey to the End of the World and Back](#) (March, Granta), [Our Final Warning: Six Degrees of Climate Emergency](#) (April, Fourth Estate), and [Ocean Outbreak: Confronting the Rising Tide of Marine Disease](#) (May, University of California Press).

Two important forthcoming books dealing with ecosystems are the New Naturalist [Ponds, Pools and Puddles](#), due March from Harper Collins, and the paperback of [Open Ecosystems: Ecology and Evolution Beyond the Forest Edge](#), due January from Oxford University Press. On a related subject is the paperback rerelease of [Seeds of Empire: The Environmental Transformation of New Zealand](#), which was published earlier this year by I.B. Tauris.

For evolutionary biologists and palaeontologists two books due in April worth mentioning are [Fossilization: Understanding the Material Nature of Ancient Plants and Animals](#) from Johns Hopkins University Press and the paperback rerelease of [Some Assembly Required: Decoding Four Billion Years of Life, from Ancient Fossils to DNA](#) from Oneworld Publications.

Good reads and nature writing this month comes in the form of Melissa Harrison's just published [The Stubborn Light of Things: A Nature Diary](#) from Faber & Faber and paperback rereleases of Patrick Barkham's [Wild Child: Coming Home to Nature](#) (April, Granta), and Marianne Taylor's [Tracking the Highland Tiger: In Search of Scottish Wildcats](#) (May, Bloomsbury). Furthermore, Indiana University Press earlier this year published a translation of Steller's classic work [Eastbound through Siberia: Observations from the Great Northern Expedition](#).

We see this month out with a small miscellany of titles. Breakwater Books will publish [Field Guide to Newfoundland and Labrador](#) in May. A major book for field biologists of all stripes will be [Understanding Animal Behaviour: What to Measure and Why](#), due April from Cambridge University Press. And, finally, Verlag Dr. Friedrich Pfeil has just published the 2-volume [Terrestrial Impact Structures: The TanDEM-X Atlas](#) which is a most remarkable reference work for geologists and astronomers.

As always, if you are looking for a particular title that we do not yet have in our range, or you would like to suggest a title for NHBS to stock, please do get in touch. In the meantime, stay safe and keep well.
