

### Fixing your Red Squirrel Box to a Tree

**Before you start:** Your box should have 2 green mounts, one at the bottom of the box and one at the top. These should be attached by only one screw and one screw should be in the box itself.

1. Remove screw B
2. Rotate the green mount so that hole A fits over the hole that screw B was in
3. re-attach screw B in place so that the green shape fits with the point with hole C facing directly up
4. Repeat this for the bottom green mount

You should now have the mounts fixed in such a way as you have 2 holes (hole C) at either end of the box for screws to drill into a tree and secure your nest box.
