

## Instructions for assembly

1. Assemble the outer walls of the trap container into a square by joining the strips of hook & loop tape together.
2. With the flaps folded to the outside of the box take the base panel, with the darker side facing up, and slide it down inside the box and join it to the side walls using the hook & loop tape.
3. Hold the side wall lamp holder support frame over one of the top edges of the box, ensuring it is one without a flap, and slot into position. Make sure the tube with the securing screw is on the inside of the box.
4. Place egg boxes or similar inside the trap and fold the flaps over so that they rest on the wall support.
5. Place the lamp holder arm fully into the side support frame and tighten screw to secure.
6. Support the lamp holder with one hand and carefully screw in the blacklight bulb. It needs to be tight enough to ensure connection but over-tightening can cause damage to the contacts inside the bulb holder.
7. Your trap is now ready to be plugged into a mains power source.
