

HD IP Bird Box Camera Kit  
Quick Start Guide

## How to Set Up

Thank you for purchasing the Green Feathers HD IP Bird Box Camera. Read this quick start guide to start setting up your camera.

❗ Before you install the camera into position in your bird box, wire up and test the camera indoors near your router so you know that it is operating properly.

The diagram below shows you how the camera kit connects together.

### 1. Connect the cable to the camera

Take the longer network cable and pass one end through the weatherproof adaptor parts. Now connect the cable's jack into the port on the camera's trailing cable. Next, push the weatherproof adaptor parts to meet the connector block and twist the end to secure. Use the rubber bung to create a waterproof seal between the end of the adaptor and the network cable.

## 2. Connect your camera to power

The other end of the network cable connects into the port labelled **PoE** on the power block as pictured.

## 3. Connect to your router

Using the shorter network cable, plug this into the **LAN** port on the power block and the other end into one of the available ports on your router. You can now connect the 3-pin plug into mains power and switch on the power.

## 4. Install the software and download the apps

Now you need to download the software and/or apps to configure the camera and be able to watch live images. You can find links on the next page.

### Hints & Tips

- To prevent any noise being picked up on the microphone, make sure that it is positioned in a way such that it is pointing away from the camera's body
- Ensure that you have enough network cable length to comfortably reach between your bird box and network router
- If your router is too far away you can use Powerline adaptors to send the data using your house's electrical circuits

## Where can I find the software and apps?

Windows

You can download the software for your Windows PC going to the following link in your browser: <https://bit.ly/2sZagxH>

To download the app to your iOS or Android mobile device from the respective app stores search for **XMeye** or scan the QR codes below.

 iOS

 Android

### Find more help online
